

# Description

## 一、 Circuit Description

Receiver electric power supplied by DC12V; RF part mainly constitute by crystal oscillator of frequency stabilization and high frequency signal amplifier, The signal of two pieces of data of decode and coding which sent by high frequency signal amplifier will received for decoding .

## 二、 Parameter Description

1. Working voltage: DC12V.
2. Working current: 40MA.
3. Receiving sensitivity:-104dbm.
4. Encoding type: fixed code
